

BLACK OAK

Solid, through-coloured
and beautiful - new
design solutions on the
table!

B L A C K O A K

With our latest product from Herring Massiv-træ, your worktop supplier is now in a position to introduce you and your customers to different and exciting kitchen solutions.

Our worktop solutions in solid, through-coloured oak have an incredibly dark glow, at the same time allowing the wood's structure to play along. Behind the new product is a newly developed method of production, whereby the solid wood is solid, through-coloured. BLACK OAK is colourfast and its strength is maintained.

Solid and strong

BLACK OAK worktops are of an extremely high quality. Only the best raw wood is used, and all worktops are hand laid before glueing.

Can be treated again and again

The strong worktops are particularly easy to clean. The wood is extremely receptive to oil treatment, and can be sanded down – again and again.

BLACK OAK – worktops made from finger-jointed staves

Stave width: 41.5mm
Thickness: 30 and 40mm
Lengths: up to 5,000mm
